

Lawrence Wang O.D.
Stephen Myers O.D.
Nicholas Cutunilli O.D.
Kyle Griffin O.D.

We are a private practice made up of three offices across Las Vegas and we are in a position to grow further. Between the three offices, we have a large demographic of over 73,000 patients to recruit from. Some of our specialties include myopia control and treating dry eye disease non invasive aesthetics periorbital rejuvenation.

Some of the state of the art equipment that our offices have (including, but not limited to) are as follows:

- Topcon KR-800S, Topcon Maestro 2
- Oculus Pentacam
- Optovue Optomap
- Zeiss Humphrey Matrix
- BTL Exilis, Exion, Emface
- Inmode Envision
- M&S Systems

The calibration of our equipment is checked frequently and maintenance happens on an annual basis when the device manufacturers come in.

Our offices have dedicated areas where study related items can be kept under lock and key with limited access for study personnel only. There will also be a private, dedicated work area available for Clinical Research Associates to work in during Interim Monitoring Visits.

We will provide multiple investigators and coordinators to ensure that trained staff are available for study visits to be conducted most, if not all days of the week. We want to be sure that we're doing our part to reach the enrollment goals set forth by the sponsor as quickly as possible.
